**Email:** c/o Jeni Menendez @ jeni.menendez@eversource.com

**Map #** 8      **Lot #** 8-18F, 9A, 8

**Description of proposed conditional use:**  
 Eversource Energy intends to replace six (6) structures along the G128 Transmission Line and three (3) structures along the 307 Transmission Line in the Town of Madbury. The G128 and 307 Transmission Lines share the same maintained right-of-way (ROW) corridor that will be accessed from Madbury Road. The eight structures to be replaced consist of a two-pole or three-pole wood structures that will be replaced with weathered steel to meet current industry standards. Construction crews will utilize existing established access (where present) in the ROW corridor. However, there are a number of wetlands and streams in the G128/307 Line ROW that will be temporarily impacted to access the structures proposed for replacement. In order to minimize impacts to these resources, construction crews will utilize timber matting to gain access across wetlands and streams and around the base of the structures if work pads intersect wetlands. The use of timber mats is a routine practice that reduces the impact of staging/driving heavy equipment through saturated wetland soils by dispersing the equipment weight, preventing the formation of ruts, and preventing conditions that are conducive to soil erosion. Impacted wetlands will be monitored until wetlands are revegetated.

A complete application must include a \$200 application fee.
