## **EXECUTIVE SUMMARY**

This drainage analysis examines the pre-development (existing) and post-development (proposed) stormwater drainage patterns for the proposed building and associated future site improvements at 10 Lee Road in Madbury, NH. The site is shown on the Town of Madbury Assessor's Tax Map 8 as Lot 9. The total size of the lot is 1,586,706 square-feet (36.4258 acres).

The development will provide for the future construction of a 6,996 square-foot building, with associated landscaping, utilities, and parking. The new buildings will be serviced by public water and electricity. Septic systems will be provided on-site. The development has the potential to increase stormwater runoff to adjacent properties, and therefore must be designed in a manner to prevent that occurrence. This will be done primarily by capturing stormwater runoff and routing it through appropriate stormwater facilities, designed to ensure that there will be no increase in peak runoff from the site as a result of this project.

The hydrologic modeling utilized for this analysis uses the "Extreme Precipitation" values for rainfall from The Northeast Regional Climate Center (Cornell University).

## **INTRODUCTION / PROJECT DESCRIPTION**

This drainage report is designed to assist the owner, planning board, contractor, regulatory reviewer, and others in understanding the impact of the proposed development project on local surface water runoff and quality. The project site is shown on the Town of Madbury, NH Assessor's Tax Map 8 as Lot 9. Bounding the site to north is NH Route 155 and a trust. Bounding the site to east and south is Town property, private residences, and an LLC. Bounding the site to the west is private residences and a Town conservation area. A vicinity map is included in the Appendix to this report.

The proposed development will add a new building and a new parking area adjacent to existing buildings on the site. This report makes some concept assumptions as to the future impervious coverage of the proposed lots, as requested by the Town.

This report includes information about the existing site and the proposed building necessary to analyze stormwater runoff and to design any required mitigation. The report includes maps of pre-development and post-development watersheds, subcatchment areas and calculations of runoff. The report will provide a narrative of the stormwater runoff and describe numerically and graphically the surface water runoff patterns for this site.

Proposed stormwater management methods will also be described, as well as erosion and sediment control practices. To fully understand the proposed site development the reader should also review a complete site plan set in addition to this report.

## **METHODOLOGY**

"Extreme Precipitation" values from The Northeast Regional Climate Center (Cornell University) have been used for modeling purposes. These values have been used in this analysis.

This report uses the US Soil Conservation Service (SCS) Method for estimating stormwater runoff. The SCS method is published in The National Engineering Handbook (NEH), Section 4 "Hydrology" and includes the Technical Release No. 20, (TR-20) "Computer Program for Project Formulation Hydrology", and Technical Release No. 55 (TR-55) "Urban Hydrology for Small Watersheds" methods. This report uses the HydroCAD version 10.0 program,

written by HydroCAD Software Solutions LLC, Chocorua, N.H., to apply these methods for the calculation of runoff and for pond modeling. Rainfall data and runoff curve numbers are taken from “The Stormwater Management and Erosion Control Handbook for Urban and Developing Areas in New Hampshire.”

Time of Concentration (Tc) is calculated by entering measured flow path data such as flow path type, length, slope and surface characteristics into the HydroCAD program. For the purposes of this report, a minimum time of concentration of 5 minutes is used.

The storm events used for the calculations in this report are the 2-year, 10-year, and 25-year (24-hour) storms. Watershed basin boundaries have been delineated using topographic maps prepared by Ambit Engineering and field observations to confirm.

### **SITE SPECIFIC INFORMATION**

Based on the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS), Soil Survey of Rockingham County, New Hampshire the site is made up of eight soil types:

<b>Soil Symbol</b>	<b>Soil Name and Slopes</b>
<b>CfB</b>	Charlton fine sandy loam, 3 to 8 percent slopes
<b>CsB</b>	Charlton fine sandy loam, 3 to 8 percent slopes, very stony
<b>PdB</b>	Paxton fine sandy loam, 0 to 8 percent slopes, very stony
<b>PdD</b>	Paxton fine sandy loam, 15 to 25 percent slopes, very stony
<b>PdE</b>	Paxton very stony fine sandy loam, 25 to 60 percent slopes
<b>ScA</b>	Scantic silt loam, 0 to 3 percent slopes
<b>SuB</b>	Sutton fine sandy loam, 0 to 8 percent slopes, very stony
<b>WsB</b>	Woodbridge fine sandy loam, 0 to 8 percent slopes, very stony

All existing and proposed site development takes place on one soil type:

CfB – Charlton fine sandy loam, 3 to 8 percent slopes. The soil report qualifies the depth to the water table or restrictive feature as greater than 80 inches. The Hydrologic Soil Group

is class B, with an estimated infiltrative capacity of moderately low to high (0.14 to 14.17 in/hr).

A copy of the custom soil survey for this project site is included in the Appendix to this report.

The physical characteristics of the site consist of flat (1-3%) to steep (25-60%) grades that generally slope from the north to the south of the lot. Elevations on the site range from 140 to 194 feet above sea level. The existing site is partially developed and includes two existing buildings located at the north of the lot, with an asphalt parking area. Vegetation around the developed portion of the lot consists of established grasses, shrubs, and trees. The rest of the lot is undeveloped, forested land.

According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) number 33017C0320E (effective date September 30, 2015), the project site is located in Zone X and is determined to be outside of the 0.2% annual chance floodplain. A copy of the FIRM map is included in the Appendix.

### **PRE-DEVELOPMENT DRAINAGE**

In the pre-development condition, the site has been analyzed as five subcatchment basins (E1, E2, E3, E4, and E5) based on localized topography and discharge location.

Subcatchment E1 contains all the proposed development area and most of the existing development, and drains to the west of the north “arm” of the lot. Subcatchment E2 contains a minor amount of developed area and drains to the east of the north arm of the lot. Subcatchment E3 drains south to Beards Creek running through the middle of the lot and then to the east. Subcatchment E4 is a small area diverted from subcatchment E3, which drains to the east. Subcatchment E5 forms the entire southern “arm” of the property, which drains to the north in the direction of Beards Creek. E5 contains some development in the form of electrical lines, but that land use is not expected to change the impervious area in the analysis, and will not be altered by the proposed development.

**Table 1: Pre-Development Watershed Basin Summary**

<b>Watershed Basin ID</b>	<b>Basin Area (SF)</b>	<b>Tc (MIN)</b>	<b>CN</b>	<b>10-Year Runoff (CFS)</b>	<b>25-Year Runoff (CFS)</b>	<b>To Design Point</b>
<b>E1</b>	295,488	19.0	60	7.75	13.94	DP1
<b>E2</b>	15,070	5.5	75	1.36	1.98	DP1
<b>E3</b>	232,162	58.3	58	2.35	4.51	DP1
<b>E4</b>	371	5.0	55	0.01	0.02	DP1
<b>E5</b>	1,032,671	24.0	68	38.00	60.48	DP1

### **POST-DEVELOPMENT DRAINAGE**

The proposed development has been designed to match the pre-development drainage patterns to the greatest extent feasible. In the post-development condition, the site has been analyzed as six major watershed basins, (P1a, P1b, P2, P3, P4, and P5). Since the design of the future houses is currently conceptual, some assumptions were made regarding the delineation of watershed basins and the determination of land usage. The delineation between Basins P2, P3, P4 and P5 correspond to approximately the same as the delineation between E2, E3, E4 and E5, respectively. Subcatchments P1a and P1b were subdivided from subcatchment P1, to represent the distinction between relatively unchanged land in P1a, and proposed development in P1b. Subcatchments P1a, P1b, and P2 are the only lots with any expected change from the proposed development.

Subcatchment P1a contains a significant increase in impervious area, and as such, will be detained in a detention pond, and released with an outlet control structure. In the event of a 100-year storm event or an outlet control structure failure, an emergency bypass was designed to release stormwater. Since all subcatchments ultimately flow to Beards Creek, the creek will serve as the considered discharge point for the entire property.

**Table 2: Post-Development Watershed Basin Summary**

Watershed Basin ID	Basin Area (SF)	Tc (MIN)	CN	10-Year Runoff (CFS)	25-Year Runoff (CFS)	Design Point
P1a	214,195	19.0	58	4.82	9.06	DP1
P1b	83,653	6.9	81	8.82	12.28	DP1
P2	13,441	5.5	66	0.83	1.32	DP1
P3	231,924	58.3	58	2.35	4.50	DP1
P4	382	5.0	55	0.01	0.02	DP1
P5	1,032,212	24.0	70	38.00	60.48	DP1

The overall impervious coverage of the area analyzed in this report for all basins **increases** from 0.704 acres (1.95%) in the pre-development condition to 1.238 acres (3.42%) in the post-development condition. Since the site represents an increase in impervious area, the project proposes the construction of a detention pond to reduce the peak flow discharge from the site.

Table 3 shows a summary of the comparison between pre-developed flows and post-developed flows for the design point in Beards Creek (DP1). The comparison considers the reduced flows as a result of infiltration.

**Table 3: Pre-Development to Post-Development Comparison**

Design Point	Q2 (CFS)		Q10 (CFS)		Q25 (CFS)		Description
	Pre	Post	Pre	Post	Pre	Post	
DP1	15.49	15.21	46.17	45.28	75.59	74.37	Beards Creek

Note that all drainage points of interest experience lower or equal peak flows.

**OFFSITE INFRASTRUCTURE CAPACITY**

There is no Town infrastructure utilized in this project in regard to storm drainage. All retention and routing to the final destination of the stormwater is done on-site.

## **EROSION AND SEDIMENT CONTROL PRACTICES**

The erosion potential for this site as it exists is moderate due to the presence of gravel areas that are highly erodible. During construction, the major potential for erosion is wind and stormwater runoff. The contractor will be required to inspect and maintain all necessary erosion control measures, as well as installing any additional measures as required. All erosion control practices shall conform to “The Stormwater Management and Erosion Control Handbook for Urban and Developing Areas in New Hampshire.” Some examples of erosion and sediment control measures to be utilized for this project during construction may include:

- Silt Soxx (or approved alternative) located at the toe of disturbed slopes
- Catch Basin Filters
- Stabilized construction entrance at access point to the site
- Temporary mulching and seeding for disturbed areas
- Spraying water over disturbed areas to minimize wind erosion

After construction, permanent stabilization will be accomplished by permanent seeding, landscaping, and surfacing the access drives and parking areas with asphalt paving and other areas with concrete walkways.

## **CONCLUSION**

The proposed development has been designed to match the pre-development drainage patterns to the greatest extent feasible. With the design of the holding pond, the post-development runoff rates are reduced to be below the pre-development runoff rates. Erosion and sediment control practices will be implemented for both the temporary condition during construction and for final stabilization after construction. Therefore, there are no negative impacts to downstream receptors or adjacent properties anticipated as a result of this project.

## **EXECUTIVE SUMMARY**

This drainage analysis examines the pre-development (existing) and post-development (proposed) stormwater drainage patterns for the proposed building and associated future site improvements at 10 Lee Road in Madbury, NH. The site is shown on the Town of Madbury Assessor's Tax Map 8 as Lot 9. The total size of the lot is 1,586,706 square-feet (36.4258 acres). This addendum includes the results of a 50-year storm event, as is conditionally required by the Town of Madbury.

The development will provide for the future construction of a 6,996 square-foot building, with associated landscaping, utilities, and parking. The new buildings will be serviced by public water and electricity. Septic systems will be provided on-site. The development has the potential to increase stormwater runoff to adjacent properties, and therefore must be designed in a manner to prevent that occurrence. This will be done primarily by capturing stormwater runoff and routing it through appropriate stormwater facilities, designed to ensure that there will be no increase in peak runoff from the site as a result of this project.

The hydrologic modeling utilized for this analysis uses the "Extreme Precipitation" values for rainfall from The Northeast Regional Climate Center (Cornell University).

## **PRE-DEVELOPMENT DRAINAGE**

In the pre-development condition, the site has been analyzed as five subcatchment basins (E1, E2, E3, E4, and E5) based on localized topography and discharge location. Subcatchment E1 contains all the proposed development area and most of the existing development, and drains to the west of the north “arm” of the lot. Subcatchment E2 contains a minor amount of developed area and drains to the east of the north arm of the lot. Subcatchment E3 drains south to Beards Creek running through the middle of the lot and then to the east. Subcatchment E4 is a small area diverted from subcatchment E3, which drains to the east. Subcatchment E5 forms the entire southern “arm” of the property, which drains to the north in the direction of Beards Creek. E5 contains some development in the form of electrical lines, but that land use is not expected to change the impervious area in the analysis, and will not be altered by the proposed development.

**Table 1: Pre-Development Watershed Basin Summary**

<b>Watershed Basin ID</b>	<b>Basin Area (SF)</b>	<b>Tc (MIN)</b>	<b>CN</b>	<b>10-Year Runoff (CFS)</b>	<b>25-Year Runoff (CFS)</b>	<b>50-Year Runoff (CFS)</b>	<b>To Design Point</b>
<b>E1</b>	295,488	19.0	60	7.75	13.94	20.42	DP1
<b>E2</b>	15,070	5.5	75	1.36	1.98	2.57	DP1
<b>E3</b>	232,162	58.3	58	2.35	4.51	6.82	DP1
<b>E4</b>	371	5.0	55	0.01	0.02	0.03	DP1
<b>E5</b>	1,032,671	24.0	68	38.00	60.48	82.84	DP1

## **POST-DEVELOPMENT DRAINAGE**

The proposed development has been designed to match the pre-development drainage patterns to the greatest extent feasible. In the post-development condition, the site has been analyzed as six major watershed basins, (P1a, P1b, P2, P3, P4, and P5). Since the design of the future houses is currently conceptual, some assumptions were made regarding the delineation of watershed basins and the determination of land usage. The delineation between Basins P2, P3, P4 and P5 correspond to approximately the same as the delineation between E2, E3, E4 and E5, respectively. Subcatchments P1a and P1b were subdivided from subcatchment P1, to represent the distinction between relatively unchanged land in P1a, and proposed development in P1b.

Subcatchments P1a, P1b, and P2 are the only lots with any expected change from the proposed development.

Subcatchment P1a contains a significant increase in impervious area, and as such, will be detained in a detention pond, and released with an outlet control structure. In the event of a 100-year storm event or an outlet control structure failure, an emergency bypass was designed to release stormwater. Since all subcatchments ultimately flow to Beards Creek, the creek will serve as the considered discharge point for the entire property.

**Table 2: Post-Development Watershed Basin Summary**

<b>Watershed Basin ID</b>	<b>Basin Area (SF)</b>	<b>Tc (MIN)</b>	<b>CN</b>	<b>10-Year Runoff (CFS)</b>	<b>25-Year Runoff (CFS)</b>	<b>50-Year Runoff (CFS)</b>	<b>Design Point</b>
<b>P1a</b>	214,195	19.0	58	4.82	9.06	13.52	DP1
<b>P1b</b>	83,653	6.9	81	8.82	12.28	15.51	DP1
<b>P2</b>	13,441	5.5	66	0.83	1.32	1.81	DP1
<b>P3</b>	231,924	58.3	58	2.35	4.50	6.81	DP1
<b>P4</b>	382	5.0	55	0.01	0.02	0.03	DP1
<b>P5</b>	1,032,212	24.0	70	38.00	60.48	82.80	DP1

The overall impervious coverage of the area analyzed in this report for all basins **increases** from 0.704 acres (1.95%) in the pre-development condition to 1.238 acres (3.42%) in the post-development condition. Since the site represents an increase in impervious area, the project proposes the construction of a detention pond to reduce the peak flow discharge from the site. Table 3 shows a summary of the comparison between pre-developed flows and post-developed flows for the design point in Beards Creek (DP1). The comparison considers the reduced flows as a result of infiltration.

**Table 3: Pre-Development to Post-Development Comparison**

Design Point	Q2 (CFS)		Q10 (CFS)		Q25 (CFS)		Q50 (CFS)		Description
	Pre	Post	Pre	Post	Pre	Post	Pre	Post	
DP1	15.49	15.21	46.17	45.28	75.59	74.37	105.15	103.72	Beards Creek

## **CONCLUSION**

The proposed development has been designed to match the pre-development drainage patterns to the greatest extent feasible. With the design of the holding pond, the post-development runoff rates are reduced to be below the pre-development runoff rates. Erosion and sediment control practices will be implemented for both the temporary condition during construction and for final stabilization after construction. Therefore, there are no negative impacts to downstream receptors or adjacent properties anticipated as a result of this project.

### MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service  
 Web Soil Survey URL:  
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Strafford County, New Hampshire  
 Survey Area Data: Version 20, May 29, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Dec 31, 2009—Sep 9, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

## Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
CfB	Charlton fine sandy loam, 3 to 8 percent slopes	9.6	25.4%
CsB	Charlton fine sandy loam, 3 to 8 percent slopes, very stony	2.6	6.8%
PdB	Paxton fine sandy loam, 0 to 8 percent slopes, very stony	3.9	10.2%
PdD	Paxton fine sandy loam, 15 to 25 percent slopes, very stony	6.5	17.1%
PdE	Paxton very stony fine sandy loam, 25 to 60 percent slopes	3.3	8.6%
ScA	Scantic silt loam, 0 to 3 percent slopes	2.7	7.0%
SuB	Sutton fine sandy loam, 0 to 8 percent slopes, very stony	3.3	8.7%
WsB	Woodbridge fine sandy loam, 0 to 8 percent slopes, very stony	6.2	16.2%

## Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas

## Custom Soil Resource Report

are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

## Description of Charlton, Very Stony

### Setting

*Landform:* Ground moraines, ridges, hills

*Landform position (two-dimensional):* Backslope, shoulder, summit

*Landform position (three-dimensional):* Side slope, crest, nose slope

*Down-slope shape:* Linear, convex

*Across-slope shape:* Convex

*Parent material:* Coarse-loamy melt-out till derived from granite, gneiss, and/or schist

### Typical profile

*Oe - 0 to 2 inches:* moderately decomposed plant material

*A - 2 to 4 inches:* fine sandy loam

*Bw - 4 to 27 inches:* gravelly fine sandy loam

*C - 27 to 65 inches:* gravelly fine sandy loam

### Properties and qualities

*Slope:* 3 to 8 percent

*Surface area covered with cobbles, stones or boulders:* 1.6 percent

*Depth to restrictive feature:* More than 80 inches

*Drainage class:* Well drained

*Runoff class:* Low

*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to high (0.14 to 14.17 in/hr)

*Depth to water table:* More than 80 inches

*Frequency of flooding:* None

*Frequency of ponding:* None

*Maximum salinity:* Nonsaline (0.0 to 1.9 mmhos/cm)

*Available water capacity:* Moderate (about 8.7 inches)

### Interpretive groups

*Land capability classification (irrigated):* None specified

*Land capability classification (nonirrigated):* 6s

*Hydrologic Soil Group:* B

*Ecological site:* F142XB009VT - Acidic Till Upland

*Hydric soil rating:* No

## Minor Components

### Sutton, very stony

*Percent of map unit:* 5 percent

*Landform:* Hills, ground moraines

### Minor Components

#### **Woodbridge, very stony**

*Percent of map unit:* 5 percent

*Landform:* Hills, ground moraines, drumlins

*Landform position (two-dimensional):* Backslope

*Landform position (three-dimensional):* Side slope

*Down-slope shape:* Concave

*Across-slope shape:* Linear

*Hydric soil rating:* No

#### **Charlton, very stony**

*Percent of map unit:* 4 percent

*Landform:* Hills

*Landform position (two-dimensional):* Backslope

*Landform position (three-dimensional):* Side slope

*Down-slope shape:* Convex

*Across-slope shape:* Convex

*Hydric soil rating:* No

#### **Ridgebury, very stony**

*Percent of map unit:* 1 percent

*Landform:* Drainageways, hills, ground moraines, depressions, drumlins

*Landform position (two-dimensional):* Toeslope, footslope

*Landform position (three-dimensional):* Base slope, head slope

*Down-slope shape:* Concave

*Across-slope shape:* Concave

*Hydric soil rating:* Yes

## **PdE—Paxton very stony fine sandy loam, 25 to 60 percent slopes**

### **Map Unit Setting**

*National map unit symbol:* 9d8h

*Elevation:* 150 to 1,100 feet

*Mean annual precipitation:* 36 to 71 inches

*Mean annual air temperature:* 39 to 55 degrees F

*Frost-free period:* 140 to 240 days

*Farmland classification:* Not prime farmland

### **Map Unit Composition**

*Paxton and similar soils:* 85 percent

*Minor components:* 15 percent

*Estimates are based on observations, descriptions, and transects of the mapunit.*

## Description of Paxton

### Setting

*Parent material:* Basal lodgement till derived from granite and gneiss and/or basal lodgement till derived from schist

### Typical profile

*H1 - 0 to 11 inches:* very stony fine sandy loam

*H2 - 11 to 22 inches:* fine sandy loam

*H3 - 22 to 41 inches:* fine sandy loam

### Properties and qualities

*Slope:* 25 to 60 percent

*Surface area covered with cobbles, stones or boulders:* 1.6 percent

*Depth to restrictive feature:* More than 80 inches

*Drainage class:* Well drained

*Runoff class:* High

*Capacity of the most limiting layer to transmit water (Ksat):* Very low to moderately high (0.00 to 0.20 in/hr)

*Depth to water table:* About 24 to 36 inches

*Frequency of flooding:* None

*Frequency of ponding:* None

*Available water capacity:* Low (about 4.4 inches)

### Interpretive groups

*Land capability classification (irrigated):* None specified

*Land capability classification (nonirrigated):* 7s

*Hydrologic Soil Group:* C

*Ecological site:* F144AY007CT - Well Drained Dense Till Uplands

*Hydric soil rating:* No

## Minor Components

### Not named

*Percent of map unit:* 12 percent

*Hydric soil rating:* No

### Hollis

*Percent of map unit:* 3 percent

*Hydric soil rating:* No

## ScA—Scantic silt loam, 0 to 3 percent slopes

### Map Unit Setting

*National map unit symbol:* 9d8s

*Elevation:* 0 to 260 feet

*Mean annual precipitation:* 36 to 71 inches

*Mean annual air temperature:* 39 to 55 degrees F

*Frost-free period:* 140 to 240 days

*Farmland classification:* Farmland of local importance

**Map Unit Composition**

*Scantic and similar soils: 85 percent*

*Minor components: 15 percent*

*Estimates are based on observations, descriptions, and transects of the mapunit.*

**Description of Scantic**

**Setting**

*Landform: Marine terraces*

**Typical profile**

*H1 - 0 to 13 inches: silt loam*

*H2 - 13 to 23 inches: silty clay loam*

*H3 - 23 to 40 inches: silty clay*

**Properties and qualities**

*Slope: 0 to 3 percent*

*Depth to restrictive feature: More than 80 inches*

*Drainage class: Poorly drained*

*Runoff class: Medium*

*Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately high (0.00 to 0.20 in/hr)*

*Depth to water table: About 0 to 12 inches*

*Frequency of flooding: None*

*Frequency of ponding: None*

*Available water capacity: Moderate (about 6.4 inches)*

**Interpretive groups**

*Land capability classification (irrigated): None specified*

*Land capability classification (nonirrigated): 4w*

*Hydrologic Soil Group: C/D*

*Hydric soil rating: Yes*

**Minor Components**

**Not named wet**

*Percent of map unit: 5 percent*

*Landform: Marine terraces*

*Hydric soil rating: Yes*

**Biddeford**

*Percent of map unit: 5 percent*

*Landform: Marine terraces*

*Hydric soil rating: Yes*

**Swanton**

*Percent of map unit: 5 percent*

*Landform: Marine terraces*

*Hydric soil rating: Yes*

## **SuB—Sutton fine sandy loam, 0 to 8 percent slopes, very stony**

### **Map Unit Setting**

*National map unit symbol:* 2xfff  
*Elevation:* 0 to 1,410 feet  
*Mean annual precipitation:* 36 to 71 inches  
*Mean annual air temperature:* 39 to 55 degrees F  
*Frost-free period:* 140 to 240 days  
*Farmland classification:* Not prime farmland

### **Map Unit Composition**

*Sutton, very stony, and similar soils:* 85 percent  
*Minor components:* 15 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

### **Description of Sutton, Very Stony**

#### **Setting**

*Landform:* Hills, ground moraines  
*Landform position (two-dimensional):* Footslope  
*Landform position (three-dimensional):* Base slope  
*Down-slope shape:* Concave  
*Across-slope shape:* Linear  
*Parent material:* Coarse-loamy melt-out till derived from gneiss, granite, and/or schist

#### **Typical profile**

*O<sub>i</sub> - 0 to 2 inches:* slightly decomposed plant material  
*A - 2 to 7 inches:* fine sandy loam  
*Bw<sub>1</sub> - 7 to 19 inches:* fine sandy loam  
*Bw<sub>2</sub> - 19 to 27 inches:* sandy loam  
*C<sub>1</sub> - 27 to 41 inches:* gravelly sandy loam  
*C<sub>2</sub> - 41 to 62 inches:* gravelly sandy loam

#### **Properties and qualities**

*Slope:* 0 to 8 percent  
*Surface area covered with cobbles, stones or boulders:* 1.6 percent  
*Depth to restrictive feature:* More than 80 inches  
*Drainage class:* Moderately well drained  
*Runoff class:* Very high  
*Capacity of the most limiting layer to transmit water (K<sub>sat</sub>):* Moderately low to high (0.14 to 14.17 in/hr)  
*Depth to water table:* About 12 to 27 inches  
*Frequency of flooding:* None  
*Frequency of ponding:* None  
*Maximum salinity:* Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)  
*Available water capacity:* Moderate (about 8.5 inches)

#### **Interpretive groups**

*Land capability classification (irrigated):* None specified

## Custom Soil Resource Report

*Land capability classification (nonirrigated):* 6s  
*Hydrologic Soil Group:* B/D  
*Ecological site:* F144AY008CT - Moist Till Uplands  
*Hydric soil rating:* No

### Minor Components

#### **Charlton, very stony**

*Percent of map unit:* 7 percent  
*Landform:* Ridges, hills, ground moraines  
*Landform position (two-dimensional):* Backslope, shoulder, summit  
*Landform position (three-dimensional):* Crest, side slope  
*Down-slope shape:* Linear, convex  
*Across-slope shape:* Convex  
*Hydric soil rating:* No

#### **Canton, very stony**

*Percent of map unit:* 4 percent  
*Landform:* Ridges, hills, moraines  
*Landform position (two-dimensional):* Backslope, shoulder, summit  
*Landform position (three-dimensional):* Side slope, crest  
*Down-slope shape:* Convex, linear  
*Across-slope shape:* Convex  
*Hydric soil rating:* No

#### **Leicester, very stony**

*Percent of map unit:* 3 percent  
*Landform:* Hills, drainageways, ground moraines, depressions  
*Landform position (two-dimensional):* Footslope, toeslope  
*Landform position (three-dimensional):* Base slope  
*Down-slope shape:* Concave, linear  
*Across-slope shape:* Concave  
*Hydric soil rating:* Yes

#### **Whitman, very stony**

*Percent of map unit:* 1 percent  
*Landform:* Depressions, drainageways, hills, ground moraines, drumlins  
*Landform position (two-dimensional):* Toeslope  
*Landform position (three-dimensional):* Base slope  
*Down-slope shape:* Concave  
*Across-slope shape:* Concave  
*Hydric soil rating:* Yes

### **WsB—Woodbridge fine sandy loam, 0 to 8 percent slopes, very stony**

#### **Map Unit Setting**

*National map unit symbol:* 2t2qr  
*Elevation:* 0 to 1,440 feet  
*Mean annual precipitation:* 36 to 71 inches  
*Mean annual air temperature:* 39 to 55 degrees F  
*Frost-free period:* 140 to 240 days

## Custom Soil Resource Report

*Farmland classification:* Not prime farmland

### Map Unit Composition

*Woodbridge, very stony, and similar soils:* 82 percent

*Minor components:* 18 percent

*Estimates are based on observations, descriptions, and transects of the mapunit.*

### Description of Woodbridge, Very Stony

#### Setting

*Landform:* Drumlins, hills, ground moraines

*Landform position (two-dimensional):* Backslope, footslope, summit

*Landform position (three-dimensional):* Side slope

*Down-slope shape:* Concave

*Across-slope shape:* Linear

*Parent material:* Coarse-loamy lodgment till derived from gneiss, granite, and/or schist

#### Typical profile

*Oe - 0 to 2 inches:* moderately decomposed plant material

*A - 2 to 9 inches:* fine sandy loam

*Bw1 - 9 to 20 inches:* fine sandy loam

*Bw2 - 20 to 32 inches:* fine sandy loam

*Cd - 32 to 67 inches:* gravelly fine sandy loam

#### Properties and qualities

*Slope:* 0 to 8 percent

*Surface area covered with cobbles, stones or boulders:* 1.6 percent

*Depth to restrictive feature:* 20 to 43 inches to densic material

*Drainage class:* Moderately well drained

*Runoff class:* Medium

*Capacity of the most limiting layer to transmit water (Ksat):* Very low to moderately low (0.00 to 0.14 in/hr)

*Depth to water table:* About 19 to 27 inches

*Frequency of flooding:* None

*Frequency of ponding:* None

*Maximum salinity:* Nonsaline (0.0 to 1.9 mmhos/cm)

*Available water capacity:* Low (about 4.0 inches)

#### Interpretive groups

*Land capability classification (irrigated):* None specified

*Land capability classification (nonirrigated):* 6s

*Hydrologic Soil Group:* C/D

*Ecological site:* F144AY037MA - Moist Dense Till Uplands

*Hydric soil rating:* No

### Minor Components

#### Paxton, very stony

*Percent of map unit:* 10 percent

*Landform:* Hills, ground moraines, drumlins

*Landform position (two-dimensional):* Shoulder, backslope, summit

*Landform position (three-dimensional):* Crest, side slope

*Down-slope shape:* Linear, convex

*Across-slope shape:* Convex, linear

*Hydric soil rating:* No

## Custom Soil Resource Report

### **Ridgebury, very stony**

*Percent of map unit:* 8 percent

*Landform:* Ground moraines, depressions, drumlins, drainageways, hills

*Landform position (two-dimensional):* Toeslope

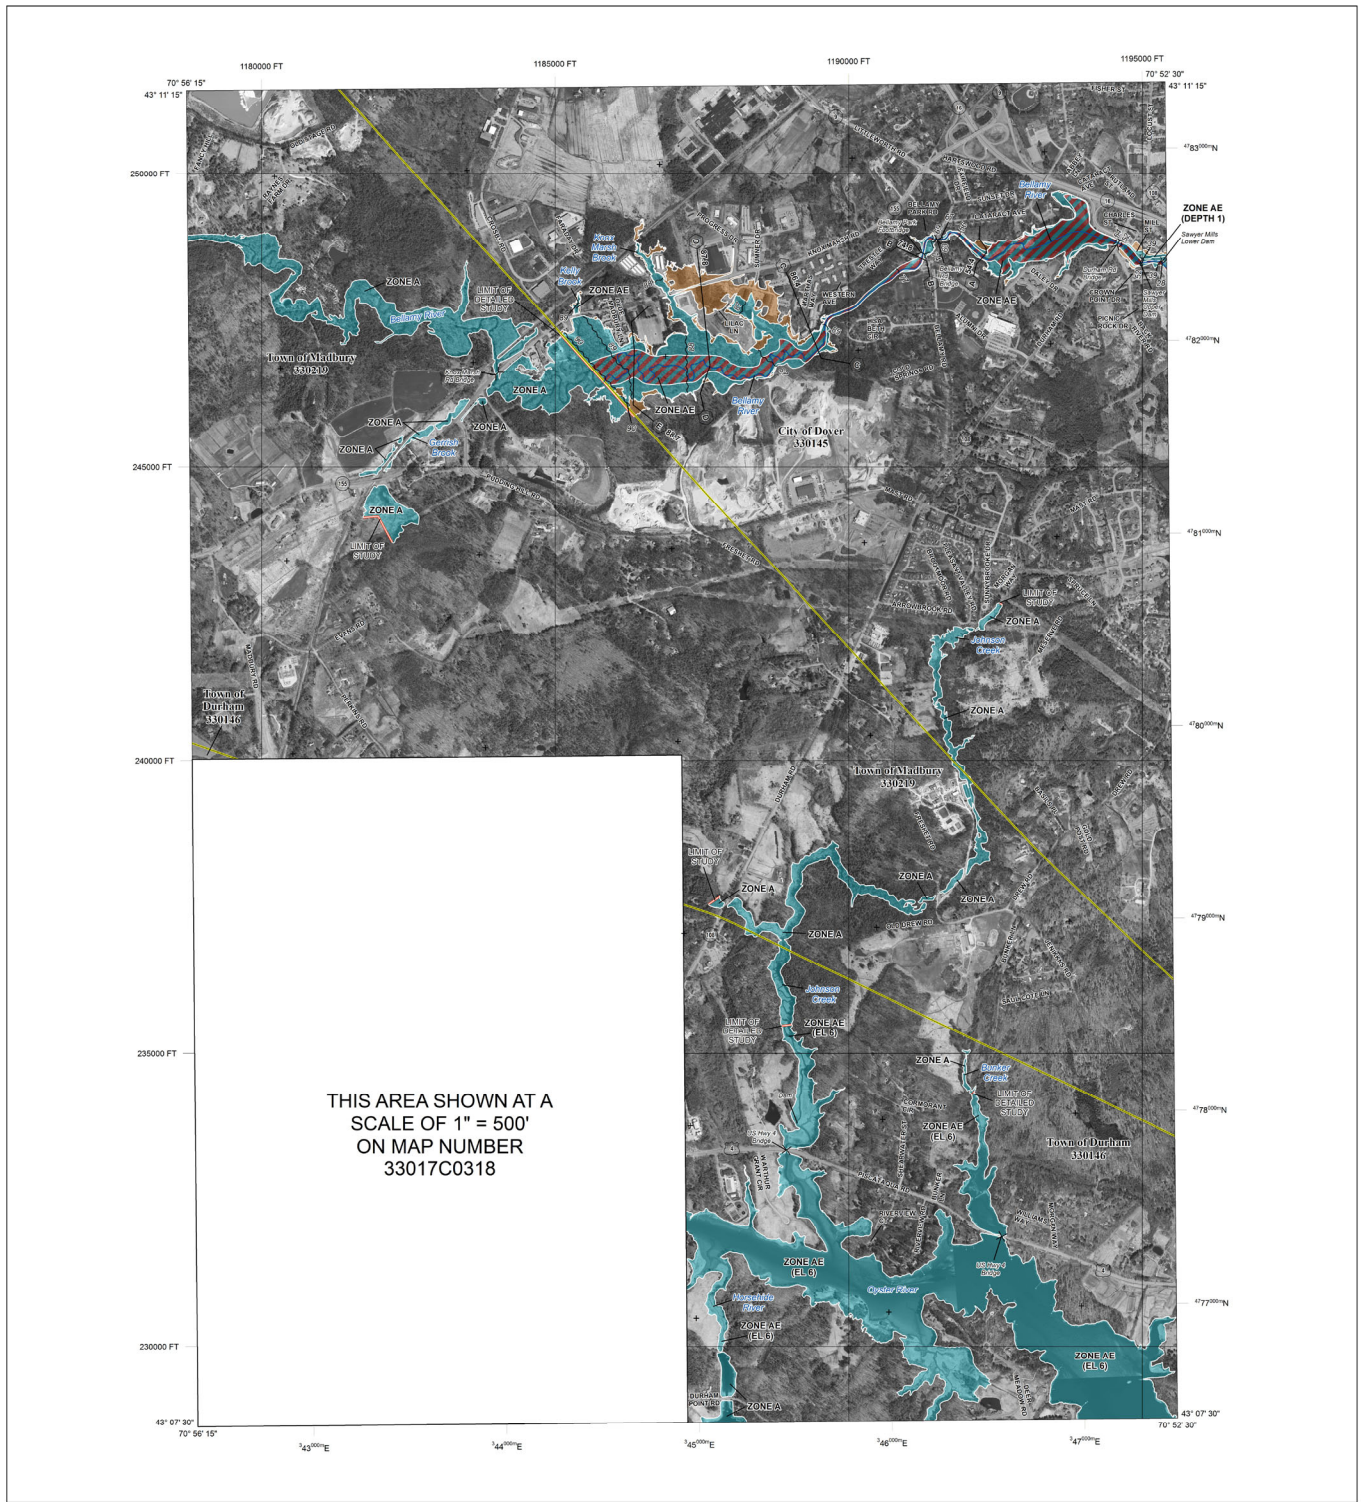

*Landform position (three-dimensional):* Head slope, base slope

*Down-slope shape:* Concave

*Across-slope shape:* Concave

*Hydric soil rating:* Yes

**NOTES TO USERS**

For information and questions about this map, available products associated with the FIRMs including historic versions of the FIRMs, how to order products or the National Flood Insurance Program in general, please call the FEMA Map Information eXchange at 1-877-FEMA-MAP (1-877-336-2627) or visit the FEMA Map Service Center website at <http://msc.fema.gov>. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of the map. Many of these products can be ordered or obtained directly from the website. Users may determine the current map date for each FIRMS panel by visiting the FEMA Map Service Center website or by calling the FEMA Map Information eXchange.

Communities approving land use adjacent FIRMS panels must obtain a current copy of the adjacent panel as well as the current FIRMS notes. These may be ordered directly from the Map Service Center at the number listed above.

For community and countywide map dates refer to the Flood Insurance Study report for this jurisdiction.

To determine if flood insurance is available in the community, contact your insurance agent or call the National Flood Insurance Program at 1-800-638-6620.

Base map information shown on this FIRMS was provided in digital format by the United States Geological Survey (USGS). This information was derived from digital orthophotography at a 2-foot resolution from photography dated 2010.

**APPENDIX F**  
**INSPECTION & MAINTENANCE PLAN**

**AMBIT ENGINEERING, INC.**  
**Civil Engineers & Land Surveyors**

***INSPECTION & LONG-TERM MAINTENANCE PLAN***  
***FOR***  
**PROPOSED HOUSING DEVELOPMENT**

**10 LEE ROAD**  
**MADBURY, NH**

**Introduction**

The intent of this plan is to provide 10 Lee Road, LLC (herein referred to as “owner”) with a list of procedures that document the inspection and maintenance requirements of the stormwater management system for this development. Specifically, the detention pond and associated structures on the project site (collectively referred to as the “Stormwater Management System”). The contact information for the owner shall be kept current, and if there is a change of ownership of the property this plan must be transferred to the new owner.

The following inspection and maintenance program is necessary to keep the stormwater management system functioning properly and will help in maintaining a high quality of stormwater runoff to minimize potential environmental impacts. By following the enclosed procedures, the owner will be able to maintain the functional design of the stormwater management system and maximize its ability to remove sediment and other contaminants from site generated stormwater runoff.

**Annual Report**

The owner shall prepare an annual Inspection & Maintenance Report. The report shall include a summary of the system’s maintenance and repair by transmission of the Inspection & Maintenance Log and other information as required. A copy of the report shall be delivered annually to the Madbury Code Enforcement Officer, if required.

***Inspection & Maintenance Checklist/Log***

The following pages contain the Stormwater Management System Inspection & Maintenance Requirements and a blank copy of the Stormwater Management System Inspection & Maintenance Log. These forms are provided to the owner as a guideline for performing the inspection and maintenance of the Stormwater Management System. This is a guideline and should be periodically reviewed for conformance with current practice and standards.

## *Stormwater Management System Components*

The Stormwater Management System is designed to mitigate both the quantity and quality of site-generated stormwater runoff. As a result, the design includes the following elements:

### *Non-Structural BMPs*

Non-Structural best management practices (BMP's) include temporary and permanent measures that typically require less labor and capital inputs and are intended to provide protection against erosion of soils. Examples of non-structural BMP's on this project include but are not limited to:

- Temporary and Permanent mulching
- Temporary and Permanent grass cover
- Shrubs and ground covers
- Miscellaneous landscape plantings
- Dust control
- Tree protection
- Topsoiling
- Sediment barriers
- Stabilized construction entrance

### *Structural BMPs*

Structural BMP's are more labor and capital-intensive structures or installations that require more specialized personnel to install. Examples on this project include but are not limited to:

- Sediment Forebay
- Detention Pond
- Outlet Control Structure

## *Inspection and Maintenance Requirements*

The following summarizes the inspection and maintenance requirements for the various BMP's that may be found on this project.

1. **Grassed areas:** After each rain event of 0.5" or more during a 24-hour period, inspect grassed areas for signs of disturbance, such as erosion. If damaged areas are discovered, immediately repair the damage. Repairs may include adding new topsoil, lime, seed, fertilizer, and mulch.
2. **Plantings:** Planting and landscaping (trees, shrubs) shall be monitored bi-monthly during the first year to insure viability and vigorous growth. Replace dead or dying vegetation with new stock and adjust the conditions that caused the dead or dying vegetation. During dryer times of the year, provide weekly watering or irrigation during the establishment period of the first year. Make the necessary adjustments to ensure long-term health of the vegetated covers, i.e., provide more permanent mulch or compost or other means of protection.

3. **Storm Drain and Catch Basin Inlets/Outlets:** Monitor drain inlets and outlet aprons for excessive accumulation of sediments or missing stone/riprap. Remove sediments as required to maintain filtering capabilities of the stone—replace missing riprap.
4. **Detention Pond:** After installation of the detention pond, perform the following inspections on an annual basis:
  - a. Monitor for excessive or concentrated accumulations of debris, or excessive erosion below the various pipe inlets. Remove debris as required and replace or augment inlet fabric strips.
  - b. Monitor the outfall structure for problems with uneven flow or clogged pipes. Repair or remove clogs as required.
  - c. Monitor vegetation on pond and replace dead or dying vegetation as required.
  - d. Monitor rodent screens and repair or replace as required.
  - e. Monitor side slopes of ponds for damage or erosion—repair, as necessary.

### **Pollution Prevention**

The following pollution prevention activities shall be undertaken to minimize potential impacts on stormwater runoff quality. The Contractor is responsible for all activities during construction. The Owner is responsible thereafter.

#### ***Spill Procedures***

Any discharge of waste oil or other pollutant shall be reported immediately to the New Hampshire Department of Environmental Services (NHDES). The Contractor/Owner will be responsible for any incident of groundwater contamination resulting from the improper discharge of pollutants to the stormwater system and may be required by NHDES to remediate incidents that may impact groundwater quality. If the property ownership is transferred, the new owner will be informed of the legal responsibilities associated with operation of the stormwater system, as indicated above.

#### ***Sanitary Facilities***

Sanitary facilities shall be provided during all phases of construction.

#### ***Material Storage***

No on site trash facility is provided. The customers are required to remove trash from the site. Hazardous material storage is prohibited.

#### ***Material Disposal***

All waste material, trash, sediment, and debris generated during construction shall be removed from the site and disposed of in accordance with applicable local, state, and federal guidelines and regulations. Removed sediments shall be if necessary dewatered prior to disposal.

### *Snow & Ice Management for Standard Asphalt and Walkways*

Snow storage will be located such that no direct untreated discharges are possible to receiving waters from the storage site.

### *Invasive Species*

Monitor the Stormwater Management System for signs of invasive species growth. If caught early, their eradication is much easier. The most likely places where invasions start is in wetter, disturbed soils or detention ponds. Species such as phragmites and purple loose-strife are common invaders in these wetter areas. If they are found, the owner shall refer to the fact-sheet created by the University of New Hampshire Cooperative Extension or contact a wetlands scientist with experience in invasive species control to implement a plan of action for eradication. Measures that do not require the application of chemical herbicides should be the first line of defense.

## CLOSED DRAINAGE STRUCTURE MAINTENANCE SHEET

INSPECTION REQUIREMENTS		
ACTION TAKEN	FREQUENCY	MAINTENANCE REQUIREMENTS
-Outlet Control Structures -Drain Manholes	<b>Every other Month</b>	<i>Check for erosion or short-circuiting                      Check for sediment accumulation                      Check for floatable contaminants</i>

**NOTES:**

<sup>(1)</sup>Rock grading and quality requirements per Standard Specifications.

<sup>(2)</sup>RSP-fabric Type of geotextile and quality requirements per Section 96 Rock Slope Protection Fabric of the Standard Specifications. For RSP Classes I thru VIII, use Class 8 RSP-fabric which has lower weight per unit area and it also has lower toughness (tensile x elongation, both at break) than Class 10 RSP-fabric. For RSP Classes IX thru XI, use Class 10 RSP-fabric.

<sup>(3)</sup>Intermediate, or B dimension (i.e., width) where A dimension is length, and C dimension is thickness.

Design Parameter	Criteria
Apron Length	$L_a = 1.8Q/D_o^{1.5} + 7D_o$ (when $TW < D_o/2$ ) $L_a = 3.0Q/D_o^{1.5} + 7D_o$ (when $TW > D_o/2$ ) Where: $L_a$ = length of the apron (feet) $D_o$ = maximum inside width of outlet pipe or channel (feet) $Q$ = outlet discharge (cfs) $TW$ = tailwater elevation (feet)
Apron Width at the Outlet End of the Apron (when there is a well-defined channel downstream of the apron)	Bottom width of the apron > bottom width of channel. The structural lining should extend at least 1 foot above the tailwater elevation but no lower than 2/3 of the vertical conduit dimension above the conduit invert
Apron Width at the Outlet End of the Apron (when there is <b>no</b> well-defined channel downstream of the apron)	$W = 3D_o + L_a$ (when $TW < D_o/2$ ) $W = 3D_o + 0.4L_a$ (when $TW > D_o/2$ ) Where: $W$ = width of the apron (feet) $L_a$ = length of the apron (feet) $D_o$ = maximum inside width of outlet pipe or channel (feet) $TW$ = tailwater elevation (feet)
Apron Width at the Culvert Outlet	$W = 3 D_o$

J:\JOB83\JUN\_3100\3140\3142\2019 Site Plans\Plans & Specs\Site\3142\_Site\_2021.Pond.dwg, 10/29/2021 5:50:18 PM, Canon TX-3000.p33

- NOTES:**
- 1) THIS PLAN IS INTENDED FOR RUNOFF ANALYSIS ONLY AND SHALL NOT BE USED FOR CONSTRUCTION.
  - 2) THE CONTRACTOR SHALL NOTIFY DIG SAFE AT 1-888-DIG-SAFE (1-888-344-7233) AT LEAST 72 HOURS PRIOR TO COMMENCING ANY EXCAVATION ON PUBLIC OR PRIVATE PROPERTY.
  - 3) UNDERGROUND UTILITY LOCATIONS ARE BASED UPON BEST AVAILABLE EVIDENCE AND ARE NOT FIELD VERIFIED. LOCATING AND PROTECTING ANY ABOVEGROUND OR UNDERGROUND UTILITIES IS THE SOLE RESPONSIBILITY OF THE CONTRACTOR AND/OR THE OWNER. UTILITY CONFLICTS SHOULD BE REPORTED AT ONCE TO THE DESIGN ENGINEER.
  - 4) CONTRACTOR SHALL INSTALL AND MAINTAIN EROSION CONTROL MEASURES IN ACCORDANCE WITH THE "NEW HAMPSHIRE STORMWATER MANUAL, VOLUME 3, EROSION AND SEDIMENT CONTROLS DURING CONSTRUCTION. (NHDES DECEMBER 2008).

**LEGEND**

EXISTING	PROPOSED	
D	D	STORM DRAIN
X-X	X-X	SILT FENCE
100	100	CONTOUR
97x3	98x0	SPOT ELEVATION
		EDGE OF PAVEMENT (EP)
		SUBCATCHMENT LINE
6	600	SUBCATCHMENT NUMBER
1234	1234	AREA IN SQUARE FEET
WOODS	WOODS	DESCRIPTION OF COVER
6	600	POND (DESIGN MODEL)
6	600	REACH (DESIGN MODEL)
		DRAINAGE VECTOR
		EDGE OF WOODS / TREES
CB	CB	CATCH BASIN
DMH	DMH	DRAIN MANHOLE
W	W	WELL
EL.	EL.	ELEVATION
EP	EP	EDGE OF PAVEMENT
FF	FF	FINISHED FLOOR
INV	INV	INVERT
TBM	TBM	TEMPORARY BENCH MARK
TYP	TYP	TYPICAL
Tc	Tc	PATH
HSG	HSG	HYDROLOGIC SOIL GROUP
SCF	SCF	SHALLOW CONCENTRATED FLOW
SF	SF	SHEET FLOW
CHANNEL	CHANNEL	CHANNEL FLOW
DP1	DP1	DESIGN POINT
