

2017-04-12

Dear Mr. Burbank,

I am reaching out to the Town of Madbury on behalf of the Piscataqua Region Estuaries Partnership (PREP) to confirm the results of the shoreland and wetland buffer and setback regulation analysis we conducted for all communities within the watershed. Attached in my previous email are the results for your municipality, and we plan to publish these results to the public in our upcoming [State of Our Estuaries Report](#) (to be released December 2017) as a social indicator for our region. We would love for someone from your community to confirm the accuracy of these data, as it is imperative that we report the most accurate and up to date information available. PREP wants to ensure that each municipality in our watershed feels included in the data collection process and to confirm that the final numbers accurately reflect the community's regulations. Our deadline for finalizing and submitting this dataset is April 19th, so unless we receive corrections from communities by April 19th, we will be publishing the numbers our staff extracted from Town of Madbury materials and previously collected data in 2013. Should any corrections be necessary, please reply to this email with the corrected numbers, or contact my colleague Abigail Lyon using the following contact information:

Abigail.Lyon@unh.edu
(603) 862-3729

Thank you so much for your time and assistance.

All the best,

Simone
